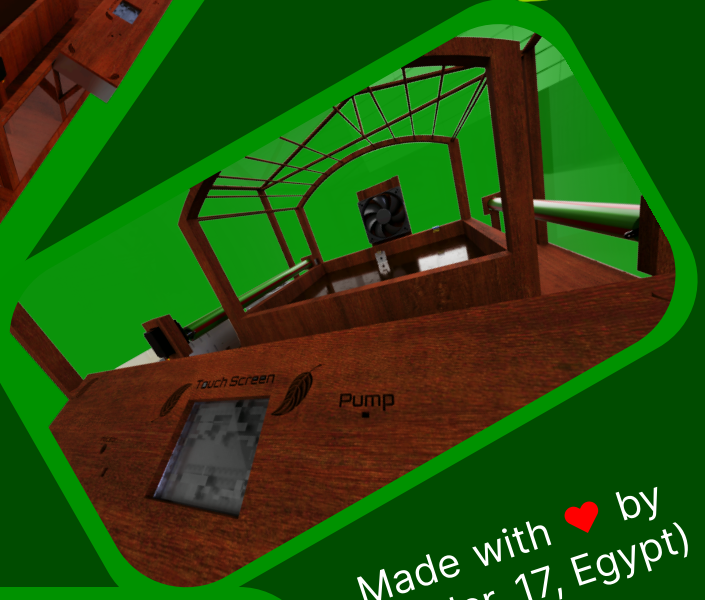
ERUCA-SYNC



HACK CLUB

Made with ❤ by
(Nader, 17, Egypt)

Eruca-Sync is a smart greenhouse with a closed-loop feedback system that can bring stability automaticly to the system by itself. It focuses on green leafy plants.

The light mechanism is the most highlighted actuator here. It is composed of two servos and two pips which rotate with each other to change different light transmissivity layers to adjust the light intensity coming from the sun .
